Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

hypothetical protein 72B - rice mitochondrion
CjSpecies: mitochondrion Oryza sativa (rice)
CjDate: 24-Mar-1999 #sequence_revision 24-Mar-1999 #text_change 09-Jul-2004
CjAccesion: T03190
R;Itadani, H.; Wakasugi, T.; Sugita, M.; Sugiura, M.; Nakazono, M.; Hirai, A.
Plant Cell Physiol. 35, 1239-1244, 1994
A;Title: Nucleotide sequence of a 28-Kpp portion of rice mitochondrial DNA: the existence A;Reference number: Z14841; MUID:95211382; PMID:7545979
A;Accession: T03190
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Residues: DNA

                   have cytostatic, hepatotropic, antiinflammatory, hypotensive, antidiabetic and vulnerary activities, and can be used in gene therapy. Compositions and methods from the present invention are useful for the cell surface receptor VEGFR-3 such as cancer, e.g. brain, lung, liver, spleen, kidney, lymph node, small intestine, blood cells, pancreas, colon, stomach, breast, endometrium, prostate, testicle, ovary, skin, head and neck, oesophagus, bone, marrow or blood, and diseases of neovascularisation, e.g. liver diseases, hypertension, post-trauma, represents a specifically claimed VEGFR-3 binding peptide from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Somatostatin analogue; therapy; cyclic peptide; autoimmune disease; endocrine disorder; cancer; diabetic-associated complication; diagnosis; gastrointestinal disorder; inflammatory disease; panoreatitis; atherosclerosis; restenosis; post-surgical pain; VIP secretion inhibitor; hormone-secreting tumour; hormone-dependent tumour; diarrhoea; vasoactive intestinal peptide; non-insulin dependent diabetes mellitus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Cyclized somatostatin analogs for inhibiting growth hormone secretion from anterior pituitary and as antiproliferative agents for the treatment
inhibits vascular endothelial growth factor receptor 3 (VEGFR-3). (I)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

```

This sequence represents a somatostatin analogue of the invention. The invention relates to a backbone cyclised somatostatin analogue that has

Example 11; Page 61; 82pp; English.

```
connected to a bridging group comprising an amide, thioether, thioester or disulphide. At least one building unit is connected via a bridging group to form a cyclic structure with a moiety selected from a second building unit, side chain of or N-terminal amino acid residue. A composition containing the analogue may be used for preventing disorders uch as cancers, autoimmune diseases, endocrine disorders, inflammatory associated complications, gastrointestinal disorders, inflammatory diseases, pancreatitis, atherosclerosis, restenosis and post-surgical associated complications, gastrointestinal disorders, inflammatory diseases, pancreatitis, atherosclerosis, restenosis and post-surgical analogues can be used for diagnosing cancer. The backbone cyclic analogue is used for imaging the existence of metatases. Somatostatin analogues can be used for the treatment patients with hormone-secreting analogues can be used for the treatment patient arity with hormone-secreting inhibition of vasoactive intestinal peptide (VIP) secretion and by direct effect on intestinal secretion. Somatostatin analogues selective to type 2 and 5 receptors may be used for treatment of non-insulin dependent diabetes mellitus. They are useful for the prevention of atherosclerosis and restenosis. The analogues are metabolically stable, selective in their in-vivo activities and safe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Vascular endothelial growth factor receptor 3 inhibitor; VEGFR-3; anglogenesis; lymphangiogenesis; vascular endothelial growth factor; cytostatic; hepatotropic; antiinflammatory; hypotensive; antidiabetic; vulnerary; cell surface receptor; cancer; neovascularisation; liver disease; hypertension; post-trauma; chronic hepatitis; haemangioma; diabetes; PDGF; platelet derived growth factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated peptide that inhibits VEGF-C and VEGF-D, useful for diagnosing, evaluating, treating disorders mediated by VEGFR-3 activity, such as cancer and diseases of neovascularization.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

The present invention describes backbone cyclised somatostatin analogues at the timocoporates at least one building unit containing one nitrogen atom of the peptide backbone connected to a bridging group (comprising an amide, thioether, thioester or disulfide) where at least one building unit is connected via the bridging group to form a cyclic structure with a side chain of an amino acid residue of the sequence or the N-terminal amino acid residue. (1) has antiarteriosclerotic, immunosuppressive, cytostatic, antidiabetic, antianflammatory and analgesic activities, and treatment of atherosclerosis, autoimmune diseases, cancers, diabetic-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   associated complications, endocrine disorders, inflammation, gastrointestinal disorders, pancreatitis, post-surgical pain, and restenosis. (1) can also be used in the diagnosis of cancer, by imaging the existence of metastases, it being labeled with a detectable probe. The present sequence represents a backbone cyclised somatostatin analogue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Identification of ligand that can mediate biological activity of target protein, comprises screening first combinatorial library having first member ligands for binding to target protein to identify target-binding

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This peptide comprises a motif located at amino acid residues 312-319 of the galactanase of Myceliophthora thermophila CBS 117.65 (see AAW27063) and at amino acid residues 311-318 of the galactanase of Humicola insolens DSM 1800 (see AAW27064). Another motif (see AAW27065) has also been identified. These motifs are characteristic of galactanases of fungiof the order Sordariales. PCR primers (see AAR85060-61) based on the motifs can be used to identify galactanase enzymes in Sordariales fungi. Such enzymes have an optimum pH above 5.8 and are useful in the food and feed industries, as well as in wine and juice processing. (Updated on 25-
                                                  The invention relates to a method of identifying a ligand that can mediate the biological activity of target protein via inhibition of the binding of target protein to a binding partner ligand comprising screening first combinatorial library having first member ligands for binding to target protein to identify target-binding ligands for method is useful for identifying ligands that can mediate the biological activity of target proteins via inhibition of the binding of target proteins used as reagent. The need for the natural binding partner be used as reagent. The natural binding partner sequence is used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Galactanase; fruit juice; vegetable juice; wine; pectin; depectinisation; animal feed; foodstuff.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Fungal galactanase and related DNA - useful in animal feed industry and fruit juice depectinisation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a composition (I) comprising a prepared human immunodeficiency virus-1 (HIV-1) group comprising an amino acid sequence selected from 51 defined amino acid sequences elected from 51 defined amino acid sequences (BAE25347 to ABP25397). (I) has virucide activity and can be used in vaccines. (I) may be used for immunising subjects against HIV-1 infections. The use of group-based vaccines has several advantages over traditional vaccines, particularly when compared to the use of whole antigens in vaccine compositions. There is evidence that the immune response to whole antigens is directed largely toward variable regions of the antigen, allowing for immune escape due to mutations. The groups for inclusion in tummour-associated antigens, which therefore reduces the likelihood of tummour-associated antigens, which therefore reduces the likelihood of entered antigens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  escape mutants. Furthermore, immunosuppressive groups that may be present in whole antigens can be avoided with the use of group-based vaccines. An additional advantage of an group-based vaccine approach is the ability to combine selected groups (CTL and HTL), and further, to modify the composition of the groups, achieving, for example, enhanced immunogenicity. Accordingly, the immune response can be modulated, as appropriate, for the target disease. Similar engineering of the response is not possible with traditional approaches. ABPLISO1 to ABPS5412 represent peptide sequences used in the exemplification of the present invention. (Updated on 11-SEP-2003 to standardise OS field)

The present invention describes a composition (I) comprising a prepared human immunodeficiency virus-1 (HIV-1) group comprising an amino acid sequences selected from 51 defined amino acid sequences (ABL2347 to ABP25397). (I) has virucide activity and can be used in vaccines. (I) may be used for immunising subjects against HIV-1 infections. The use of group-based vaccines has several advantages over traditional vaccines, particularly when compared to the use of whole antigens in vaccine compositions. There is evidence that the immune response to whole antigens is directed largely toward variable regions of the antigen, and proup-based vaccine may be selected from conserved regions of viral or an group-based vaccine may be selected from conserved regions of viral or an entigens. Purhermore, immunospenseive groups for inclusion in whole antigens can be avoided with the use of group-based vaccines. An additional advantage of an group-based vaccine approach is the ability to composition of the groups, for Land HTL), and further, to modify the composition of the groups, the immune response can be modulated, as appropriate, for the target disease. Similar enginearing of the response is not possible with traditional approaches can be modulated, as appropriate, for the target disease. Similar enginearing of the present represent peptide sequences used in the exemplification of the present represent peptide sequences used in the exemplification of the present invention. (Updated on 11-SEP-2003 to standardise OS field)

the present invention describes a composition (I) comprising a prepared human immunodeficiency virus-1 (HIV-1) group comprising an amino acid sequences delected from 51 defined amino acid sequences (ABL25347 to ABP25397). (I) has virucide activity and can be used in vaccines. (I) may be used for immunising subjects against HIV-1 infections. The use of group-based vaccines has several advantages over traditional vaccines, particularly when compared to the use of whole antigens in vaccine compositions. There is evidence that the immune response to whole antigens is directed largely toward variable regions of the antigen in group-based vaccine may be selected from conserved regions of viral crumour-associated antigens, which therefore reduces the likelihood of the antigens. Purthermore, immunospenseive groups that may be present in whole antigens can be avoided with the use of group-based vaccines. An additional advantage of an group-based vaccine approach is the ability to composition of the groups, achieving, for example, enhanced immunogenicity. Accordingly, the immune response can be modulated, as appropriate, for the target disease. Similar engineering of the response is not possible with traditional approaches. ABP155112 represent ceptures used in the examplification of the present represent epeptide sequences used in the examplification of the present invention.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a composition (I) comprising a prepared human immunodeficiency virus-1 (HIV-1) group comprising an amino acid sequences selected from 51 defined amino acid sequences (ABL23347 to ABP25397). (I) has virucide activity and can be used in vaccines. (I) may be used for immunising subjects against HIV-1 infections. The use of particularly when compared to the use of whole antigens in vaccine compositions. There is evidence that the immune response to whole articles is directed largely toward variable regions of the antigen, antigens is directed largely toward variable regions of the antigen, callowing for immune secape due to mutations. The groups for inclusion in an group-based vaccine may be selected from conserved regions of viral or an group-based vaccine may be selected from conserved regions of viral or an entigens. Which therefore reduces the likelihood of the mountains. Burkhermore, immunesuppressive groups fart may be present or in whole antigens can be avoided with the use of group-based vaccines. An additional advantage of an group-based vaccine approach is the ability to composition of the groups, achieving, for example, enhanced immunogenicity. Accordingly, the immune response can be modulated, as appropriate, for the target disease. Similar engineering of the response is not possible with traditional approaches. Application of the present represent peptide sequences used in the examplification of the present invention. (Updated on 11-SEP-2003 to standardise OS field)

A difference in activity of (I) and (II) assessed in the presence and absence of the test substance indicates that the test substance modulates cell growth. The identified cell growth modulator, preferably an inhibitor of (I) or (II), is useful for inhibits cell growth in a subject, preferably a human. The inhibitor inhibits (I) which is preferably tyrosine recombinase or type I DNA topoisomerase in humans that proving or suspected of having tumour or cancer, where the method further involves administering an effective of antitumour or anticancer agent or treatment; or who are, or are suspected of being infected by a bacterium, in which case the inhibitor inhibits Holliday junction intermediate in which case the inhibitor inhibits Holliday junction intermediate administering an effective amount of antibiotic or antibacterium administering an effective amount of antibiotic or antibacterium treatment. AAU83898-AAU83991 represents tyrosine recombinase inhibitory

This sequence represents a somatostatin analogue of the invention. The invention relates to a backbone cyclised somatostatin analogue that has connected to a bridging a nitrogen atom of the peptide backbone connected to a bridging group comprising an amide, thioether, thioester or disulphide. At least one building unit is connected via a bridging group comprising an amide, thioether, thioester or disulphide. At least one building unit is connected via a bridging group to form a cyclic structure with a moiety selected from a second building unit, side chain of or Neterminal amino acid residue. A composition containing the analogue may be used for preventing disorders such as cancers, autofinmune diseases, endocrine disorders, diabeticases composition complications, gastrointestinal disorders, inflammatory diseases, pancreatitis, atherosclerosis, restenosis and post-aurgical pain. It may also be used for diagnosing cancer. The backbone cyclic analogues can be used for imaging the existence of metastases. Somatostatin analogues can be used for the treatment patients with hormone-secreting analogues can be used for the treatment patients with hormone-secreting inhibition of vasoactive intestinal peptide (VIP) secretion and by direct effect on intestinal secretion. Somatostatin analogues selective to type of an analogue selective intestinal for the prevention of atherosclerosis and restenosis. The analogues are metabolically stable, selective in their in-vivo activities and safe metabolically stable, selective in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cyclized somatostatin analogs for inhibiting growth hormone secretion from anterior pituitary and as antiproliferative agents for the treatment

```
The present invention describes backbone cyclised somatostatin analogues

(1) that incorporates at least one building unit containing one nitrogen

atom of the peptide backbone connected to a bridging group (comprising an

anide, thiosether, thioseter or disulfide) where at least one building

unit is connected via the bridging group to form a cyclic structure with

c a moiety selected from the group consisting of a second building unit,

the side chain of an amino acid residue of the sequence or the N-terminal

c anino acid residue. (I) has antiarteriosolerotic, immunosuppressive,

cytostatic, antidiabetic, antiinflammatory and analgesic activities, and

cc can be used as a somatostatin receptor ligand. (I) are useful in the

c treatment of atherosclerosis, autoimmune diseases, cancers, diabetic-

associated complications, endocrine diseases, inflammation,

construction also be used in the diagnosis of cancer, by imaging

the existence of metastases, it being labeled with a detectable probe.

The present sequence represents a backbone cyclised somatostatin analogue

Backbone cyclised somatostatin analogue; somatostatin; SRIF; analgesic; somatotropin release inhibiting factor; somatostatin receptor subtype; synthesis; antiarteriosclerotic; immunosuppressive; cytostatic; cancer; antidiabetic; antilnilammatory; somatostatin receptor ligand; atherosclerosis; autoimmune disease; diabetic-associated complication; endocrine disorder; inflammation; gastrointestinal disorder; restenosis;

Location/Qualifiers

pancreatitis; post-surgical pain

Synthetic

Key

Backbone cyclised somatostatin analogue PTR 3177.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     "Xaa" in positions 4 and 6 stand
for an unspecified amino acid.
"Xaa" in position 8 stands for
either Glu or Asp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 12. Sequence 14, Application US/08884569A

Patent No. 6399326

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: CHIANG, MING-KO

APPLICANT: CHIANG, MING-KO

APPLICANT: FLANAGAN, JOHN G.

TITLE OF INVENTION: RECRETYOR TYROSINE PHOSPHATASE, AND USES RELATED THERETO

TITLE OF INVENTION NUMBER: US/08/884,569A

CURRENT FILING DATE: 1997-06-27

PRIOR APPLICATION NUMBER: 60/021,040

PRIOR PAPLICATION NUMBER: 60/021,040

PRIOR PRIOR PAPLICATION NUMBER: 2.1

SOFTWARE: PARCHIN Ver. 2.1

SEQ ID NO: 14

LENGTH: 6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          OTHER INFORMATION: Description of Artificial Sequence: Synthetic OTHER INFORMATION: peptide

GENERAL INFORMATION:

APPLICANT: YAMAMOTO, Hiroshi

APPLICANT: YAMAMOTO, Wikko

APPLICANT: TSUJIKAWA, Kazutake

APPLICANT: UCHINO, YUKIKO

TITLE OF INVENTION: ANTIBODIES SPECIFIC FOR INTRACELLULAR DOMAIN OF PROTEIN

TITLE OF INVENTION: TYROSINE PHOSPHATASE

TITLE OF INVENTION: TYROSINE PHOSPHATASE

TITLE OF INVENTION: TYROSINE PHOSPHATASE

CURRENT PILING DATE: 2001-04-30

PRIOR PAPLICATION NUMBER: PCT/JP98/03120

PRIOR PLING DATE: 1998-07-10

NUMBER OF SEQ ID NOS: 10

Corebellar degeneration-related protein - mouse (fragment)
C;Species: Mus musculus (house mouse)
C;Species: Mus musculus (house mouse)
C;Accession: B35640
R;Chen, Y.T.; Rettig, W.J.; Yenamandra, A.K.; Kozak, C.A.; Chaganti, R.S.K.; Posner, J.B. Proc. Natl. Acad. Sci. U.S.A. 87, 3077-3081, 1990
A;Title: Cerebellar degeneration-related antigen: a highly conserved neuroectodermal mark A;Reference number: A35640; MuID:90222173; PMID:2326268
A;Accession: B35640
A;Status: preliminary
A;Molecule type: mRNA
A;Residues: 1-6 <CHE>
